

DOCTOR'S CONFERENCE CALL #1

CONSTANCE KRONN: I guess we should get started by everybody introducing each other. Why don't you start, Dr. Tran?

GARY TRAN: I'm a veterinarian from Louisville, Kentucky. I'm a newcomer to this modality, so I would be glad to share my experiences with my colleagues.

DR. WASKEL: I'm Dr. Waskal, a chiropractor in the Minneapolis Area, do heart-rate testing, autonomic response testing, muscle testing, and I'm glad to be here to listen to what everyone has to say.

DR. STASHCO: I'm a chiropractor in Northeast PA. Jeff knows me very well. I do bio-nutritional testing, HRV and muscle testing.

DR. DAN DAVIS: Hey guys, I'm Dr. Davis and I'm from Redding, California. I am a practicing chiropractor and naturopath. And I don't have heart-rate variable, but I do have a Vega, and I do applied kinesiology, and dark field.

DR. MARRONGELLE: Hi guys. I know just about everybody here, and I've been working with Yury and Constance and the Subtle Energy formulas for well over two years now, and on the original formulas and doing research and development, analyzing what kind of concepts we can come up with. Pretty exciting stuff. We wanted to get together with those of you who are already familiar with the concept and the technology, and have used these clinically, and share some of our experience and talk about how we're using the application of Subtle Energy technology clinically.

CONSTANCE: So, Jeff, there are four or five things that we have on this call that we wanted to cover, as a general consensus. One was dosage for different types of conditions. What is the maximum amount of formulas to be taken in a single day. How to best deal with Chronic Fatigue Syndrome, and how to best describe what Vital Force formulas are and how they work. And, Number Five, was what do we mean by "energetic modulators," "dark matter," and what role do they really play. So without any more discussion on my part, why don't I turn it over to you, Jeff, and you take it from here.

DR. MARRONGELLE: OK, that's a lot of territory. Let's start with, I think, dosage parameters and multiple use. Because I'm sure all of us have faced that issue with people. How much is the right dosage for that person or another. I'm going to include veterinary references here for Dr. Tran, because I've used these with my own critters. I have ten horses and four or five dogs, and a couple of snakes--we have a funny farm. At one time or another most of my animals have been experimental models for whatever kind of situation arises for them.

What's interesting is the need for energy. The first premise is that it is not size and weight dependent. It's not like if you're giving a daily nutritional dose or if you're giving a pharmaceutical where a 200-pound guy needs more than a 100-pound woman. It really is

independent of that whole concept, and is much more dependent on that person's physical need for energy. Most all of us that are on the line can access that need by kinesiology, ART testing, EAV testing, whatever method we use. So for us, that's not really a problem, is it? If it is, then just say, Yeah, it is, what do I do? But everyone that's here on this line can access the body's needs by some method or another.

DOCTOR: So that's an effective way to dose, too.

DR. MARRONGELLE: It is. Muscle-test or EAV, that's how you can get your doses. What I've been doing--we've faithfully used the safety and effectiveness of the Subtle Energy products. It's unlimited. If it lives--if it is a living organism, it does benefit from the organizational energy of Subtle Energy formulas. We've done experiments on everything from grass to reptiles to mammals to human beings--from pediatrics to extreme geriatrics; and, really, I've never observed an adverse effect from a Subtle Energy influence alone. Never. And that's a concept we want to discuss. You know, a light came on for me when we were discussing one of Dr. Tran's successes I think it was with a chihuahua. Dr. Tran, could you share that story with us, and then I'd like to discuss my theory on it.

DR. TRAN: I have used Vital Force formulas in dogs and cats mainly, and I have nothing to base my notes on the use of these formulas on animals except from Constance and Jeff Marrongelle. My results are very spectacular. When I use them in connection with products that I've been using for the past five years in animals at my animal emergency room with Noni Juice, I found out the combination of Tahitian Noni Juice and these formulas have had the hope to fix a multitude of diseases. Since I've been introduced to these products only a few months ago, I have had amazing results in serious, life-threatening situations that I was able to reverse sometimes in the matter of a few hours.

DR. MARRONGELLE: I think the dog had a concussion--had a closed-head injury and wound up in a comatose state?

DR. TRAN: Yes. I have many patients like that. With the animal in a comatose state I was able to bring it out of the coma in two or three hours after I used the product. Sometimes, because the animal cannot swallow, we have to use tubing to get the products into the stomach.

DR. MARRONGELLE: So in that case, you actually did an intubation--delivered it not through an oral route.

DR. TRAN: Well, mainly in animals I use oral route, and then lately I asked Constance to see in cases like that I could use an IV form, and they infused energy for me in saline solution. I've been using that also.

DR. MARRONGELLE: So here's two points I wanted to make out of some of these amazing things that we don't see because we have ambulatory practices. But we do have severe closed-head injuries in animals. And they're saying what happens when we put

this energy--when we use Stress Relief formula and Clear Mind, and it wakes up a comatose head trauma. What is happening there--because we know we have physiologic brain swelling. We know we have edema, we know we have a neuro-electrical effect to the brain. What we're dealing with with the Subtle Energy products, or 85% of the material between the smallest particle of matter that we know of, what keeps quarks so far apart from one another, and be, you know, a thousandths of a millimeter instead of two-thousandth--is where Subtle works. Why does it work on our physiology? Because in that kind of trauma there's extreme disorganization energetically in that area--at the trauma site and over the entire brain. If we're putting something in--an energy in--that reorganizes the space and affects the 85% between the material--the molecular body, and sub-molecular body--then the molecules follow the energy. Is everybody with that? It's a concept that we have to own ourselves and understand in using this. And then, how we communicate that to a layperson or someone else, is going to be a different thing. But what we're really influencing with all of these products is the energy between the smallest parts. And that comprises the largest amount of any matter, including ourselves--including grass, grass seed, and dogs and cats. Why then, if we're influencing that, is dosage specific? Because the greater the need for organizational energy, the higher the dosage has to be. And, maybe the more frequent the dosage has to be.

So, this morning I had a Parkinson's case in here. We dosed him with Indium energy. I gave him 10 drops, the standard dosage, and I repeated the HRV and saw what happened, and how he felt, and retested him with EAV; and I didn't get quite enough. So I gave him another 20 drops. This gentleman could not walk appropriately, and kiddingly I said to him after he had a good EAV the second time and had a nice autonomic nervous system response, and his sympathetic and parasympathetic systems were balanced and he was very close to a normal level. This isn't the first time I've seen him. I've been working with his guy for a long time. He had a heavy metal toxicity and a formaldehyde chemical toxicity that we had to deal with, but he's been constantly on one or more of the Subtle Energy formulas to provide the energy his system could deal with the excretion response and the excretion capability. So, we did the second dosage, which would be one-and-a-half times the daily dose, and got this strong response. He needed a lot of energy. He could hardly walk. One of my nurses would always walk with him so he could coter into something, or fall or whatever. I said, "Alright, do ten jumping jacks for me," kiddingly. And he didn't do jumping jacks, but he jumped a little bit in the air. He hadn't jumped for years. I mean he couldn't get both feet off the ground because he had no balance. I said, You gotta be kidding. And before he left--he's a Mennonite guy, older gentleman in his sixties--he says, "I feel like I could just jump in the air." And he walked that much better. If I had under-dosed him, it might have taken a month for that to happen. It might have taken two weeks for him to walk better, but I kept dosing him until I got not only an autonomic nervous system response, but an observable physiological response.

The more we use these things, the more we become confident that the dosages can go higher and higher, especially on the front end when the person needs a dramatic amount of energy.

DR. DAVIS: What were your parameters on heart rate that made you feel comfortable with this dose?

DR. MARRONGELLE: He was a down-regulated parasympathetically violet, let's say, for the people who've seen a little bit on heart rate. And he was slightly in the lower left quadrant, sympathetically he was minus one. When I gave him the first dose, he moved to only on-level with sympathetic and minus two parasympathetic. So he moved about halfway toward center. When I gave him the second dose he was on-average level sympathetically and down-regulated one parasympathetically. Then when he stood up he only up-regulated one parasympathetic unit, which means he had a perfect normal nervous system response to standing up. He was only one unit to the left of dead center autonomically. It was an incredible move. And his rates and rhythms stayed very similar from one to the other. That's what we see with heart rate. Say a person's heart rate is 60 laying down and 70 standing up, it can be 61 on a repeat and 68, which is clinically insignificant--a beat or two different from both positions. But all the factors of autonomic control and the total power and the high frequency and low frequency waves from the brain to the myocardium will change. And the autonomic regulation will change without the rate and the rhythm of the heart changing, which means you've totally affected the autonomic nervous system. You haven't moved the heart rate a whole lot. What you've moved is the energy system and the brain's control of the heart rate. OK? You guys got that one?

DR. DAVIS: What was his AMV score?

DR. MARRONGELLE: His cardio-trophic myocardial response? It was like in the low 70's and then dropped to like 68. But the more important one was the vascular compensation, because that indicates how rapidly the brain readjusts your blood vessels to the standing position, and that's an important parameter in chronic fatigue. I'm going to transition into chronic fatigue off of this. OK? And explain some things we're seeing in chronic fatigue, so we're trying to transition to that.

This vascular compensation mechanism is when you stand up, your blood vessels should constrict to maintain appropriate blood pressure throughout the whole body. If there's a great disparity between the myocardial response and the vascular compensation response, then we know that something neurologically is disturbing the baro or chemo receptors and the brain is being blocked from the normal transmission of that information, either into the brain to have a reaction, or from the brain out to the blood vessels to cause the constriction. The more common thing you're going to see and maybe going unobserved in almost all of our practices--because I've seen it and I've picked it up occasionally over the years, but now that I'm looking for it, I see it more and more and more--is that in clients that have chronic fatigue and have chronic gastrointestinal problems have a Vagus nerve disturbance that leads to postural hypertension--or hypotension--and postural tachycardia--orthostatic tachycardia. When the person stands up, if the heart rate goes up extremely, and there's a strong parasympathetic response and a down-regulation of the parasympathetic system, you will have a corresponding drop in blood pressure. And if you take a standing blood pressure in most of these people with chronic fatigue, you lay

them down and you stand them up, you're going to see a fading blood pressure, usually under 100 over 60. Now, everyone thinks, That's a great blood pressure. It's horrible. It's NOT a normal blood pressure. They are much more symptomatic. They've got gastrointestinal problems because of stasis, they get dizziness, they get the heart rate jumps usually from the 60's or 70's up to 90 to 100. It means whenever they're standing up, their heart's working like crazy because their blood vessels are not compensating and they're wide open. The heart's working that hard just to pump blood around through a vascular system and wears them out. If you talk to most of your chronic fatigue people, if they could lay down all day they'd be happy. They could roll around on litters, you know?

DR.: What formulas are you finding to help that?

DR. MARRONGELLE: Well, I'm seeing--and I wish you guys would look for this--I'm seeing in the majority of cases that there is a longstanding underlying streptococcus neurotoxin relationship. That there is a history of chronic strep infections, either ear, sinus, throat, gastrointestinal, bronchitis, you name it. The byproducts of streptococcus are extremely neurotoxic, and neuro-paralytic, I would say. They really block the nervous system control. So I always look for strep in these guys. What we use to stabilize the blood pressure in the Subtle Energies what we use almost always is Stress Relief or Foundation, or a combination of those, and now the Indium, because the Indium is a re-regulator for the hypothalamus and the pituitary gland. That's just a new thing that we've been working with and some of you know about it, some of you don't. But they need that energy for re-regulation. Foundation is more for cellular exchange of ions and information, the Stress Relief, of course, works a very broad spectrum across the nervous system to help with re-regulation.

DR. DAVIS: Would the Tranquility be more of a chronic respecting in reference to Stress Relief, in an older patient or something with a problem much longer?

DR. MARRONGELLE: Yes. And, of course, very often one of the three immune systems: Acute Immune, Immune System, or Thymus. And that's going to bring us back around to the combination concept. If this person has neurological disturbance, an incompetent or an-ergic immune system--if it is an-ergic, then what are we needing to do? The answer to that is to first put in energy. OK? Before we do drainage, before we do nosode therapy, before we do iso-therapy, nutrition, or anything else. We must have the energy to utilize all this stuff.

DR. TRAN: You mentioned about Thymus formula. In an older animal when the thymus gland is atrophied, would you still use Thymus?

DR. MARRONGELLE: Yes. Absolutely. And you do get a thymic response. That's what's really amazing. Because the body recognizes the energy of that gland. It recognizes and utilizes elsewhere in the immune system the energy. And where was that when I digressed talking about the an-ergic response toward a microorganism--that the Thymus or Acute Immune or Immune formulas will provide energy for--is that we can

use three or four of the solutions at the same time if that's what the body needs. If that's what that person needs--if they need nervous system energy and immune system energy, and cellular energy, then use it all. And give them plenty of it.

DR.: Do you mix them all together, all in one glass of water?

DR. MARRONGELLE: You know, we've seen with the blends--because we've done blends--they do like homeopathy, or complex homeopathy, whatever, the one doesn't affect the other. They can be blended together. If it is a chronic case, I will use small doses of all of those very frequently. Now this gentleman, I had him doing five drops every two hours, which is going to give him six or eight doses a day.

DR. DAVIS: You're back to the Parkinson's guy?

DR. MARRONGELLE: The Parkinson's guy. Someone with chronic fatigue, postural hypotonia, etc., if they need Acute Immune support, Stress Relief, Thymus and Foundation, I'll give them three drops of each one maybe three or four times a day. They are more synergistic. The more formulas you use, the more synergistic response you get with the energies.

DR. DAVIS: So each energy is a specific energy pattern?

DR. MARRONGELLE: Oh, yes they are. Absolutely.

DR. DAVIS: So it's not multiple patterns in a remedy like Stress Relief. It is a single...

CONSTANCE: I can answer that. Yes it is a single pattern. There are a few of the remedies that are multiple, but that's what makes them what they are. Anyone who's interested in knowing which ones have the multiples in it, I'll be happy to let you know after the call.

DR. DAVIS: So using old technology, like if you were just using an electromagnetic field, like a Rife technology of specific frequency for a specific condition, then what you'd have like with the Strep is like 770 Rife's Frequency rate, but then Staph maybe 880. And if you combined the two frequencies because they are so uniquely different in wave pattern, you can still use them in the same therapy.

DR. MARRONGELL: Absolutely.

DR. DAVIS: So is this a similar kind of phenomena?

DR. MARRONGELLE: Yes. Absolutely correct.

DR. TRAN: Relying on Jeff's experience, I also use a combination of anywhere from two to four formulas in addressing animal disease conditions, and I have had very good success with that.

DR. MARRONGELLE: Well, how many of you have used multiple formulas on the same patient?

DR. DAVIS: Chronic fatigue and in a very debilitated cancer patient.

DR. MARRONGELLE: When I first wrote some of the early information, I still believe in the old "first do no harm" concept, which has really been lost in medicine today. It's "first do something," you know, make sure it's a big-time intervention. So I wrote my instructions almost a year ago to be very conservative based on my clinical experience at that time. I was saying most people respond real favorably to one or two. Three is the most that I usually see somebody use at a similar time. My thoughts have changed pretty radically on that to saying, You know, in this particular instance, you can't get too much of a good thing, because they affect so many different aspects of our energy system, and restore flow to the yin and yang in the body--whatever we want to call it. From what I've found--and I'm going to share something that I found just in the last week or two in doing laser therapy and ortho-sonic high-frequency sound wave therapy--is that if you have congestion, inflammation, whatever, of a chakra area--let's just talk about energy now--which all correspond to a major nerve plexii in the body--so if you want to go physiologic, OK, it's that nerve plexus. If you want to go Chinese model, it's the chakra, you know, energy centers--whatever we want to call them. Here's what I've observed and here's what we've all observed: If one is hyper-ergic dealing with an issue, whether physical, psychological, emotional, whatever--and another one is balancing it by being hypo-ergic--by having low energy--if one has a lot of energy, one has low energy, because it's a closed energetic system. Are we in agreement on this? Are we seeing--have we seen this, is what I'm saying here.

DR. DAVIS: Sure.

DR. MARRONGELLE: We can give a remedy that influences the thymus and have a very positive result in the prostate/genital area in the base chakra. Or we can give something that affects--like Stress Relief or Indium that affects the pituitary/hypothalamus--and have a tremendous relief to where we would normally use Golden Warmer for the gastrointestinal organs. We may give both together. What I've been doing with laser therapy and high-frequency sound therapy is following the flow of rotation of all those energy centers from the right side of the head and brain, down the right side of the body to the inguinal area, making a U-turn at the pubic area, coming up the left side, inguinal, up over the spleen, the left side of the heart and back up around, just like a racetrack--like an oval racetrack over the body. Of course, with the high-frequency sound wave, I can get a feedback from that which I don't want to get into explaining that technology, I just wanted to tell you that say we hit over the gall bladder, and I find that there's an extreme amount of oxidative stress there, and there's a lot of feedback from the high-frequency sound waves the first time around. And that may also affect the spleen when I come up the left side. And then when I come around the forehead, it will be over the right and left side of the brain at the glabellas, or right at the center of the forehead over the glabellas or the pituitary point and up over the governing

vessel over the top of the skull. When I make a second lap doing one of the energy therapies, it will move along that track somewhere and disperse. And by the third lap that we make around there, balancing that energy, there'll be homogenous energy flow. Now, we can access that--you can go back from this call, and start checking down along that area. If you're doing muscle test and you have them contact right forehead, the right cheek, the right side of the throat, sub-clavicular right under the right breast, over the liver/gall bladder, the inguinal area, you're going to find a blockage there that's going to make them go weak on ART or with a kinesiology test. Follow the circuit and see which of the energy formulas you need to put in circuit. So maybe they need five drops of Stress Relief for their head, but they need 20 drops of Golden Warmer for the gastrointestinal organs. This concept is going to really open some doors for you, because it holds the correction. It holds the nutritional correction, the anti-toxic correction; it holds the iso-correction or the drainage correction because now the flow of energy through all the meridians and all the chakras has been balanced and re-circulated. It's a really incredible concept that I'd like to see from you guys in practices a lot to grab those concepts. If you do see this same thing when you get back and start looking at this way. Is that valuable?

GROUP: Yeah!

DR. MARRONGELLE: Is it helpful in the utilization of the Subtle Energies?

GROUP: Oh, yeah.

DR. MARRONGELLE: Because each one is to influence one or more of these energy areas. It helps you with dosage, it helps you with reorganization of energy in the body, and if we truly believe in and understand energy medicine, then providing the energy and then reorganizing it by physical methods, whatever tools we use in a consistent way is going to give us consistent results from practitioner to practitioner, and we're going to see more miracles. We're all on this call because we're out on the edge already. We're all here because we didn't pull over and park intellectually in our practice, in our thought processes. That's what's important. This is like a little mastermind group because we're creative, we're inquisitive, we don't take things at face value. I don't want you to take anything I say at face value. Your thoughts are just as valuable, if not more valuable than mine. We just want to see that we observe the same thing.

DR.: What's interesting, Jeff, is what we've been doing for awhile is just using the unipolar magnet--the north and south pole--and just checking down the chakra points like that and finding which ones respond, which one weakens. If it's north pole, you treat it with south. And, of course, I'm using a magnetic field by Ludwig that actually does this with color therapy. So it's kind of similar to what you're doing. That's how I'm finding what points to test the Subtle Energies in nutrition, homeopathy and everything.

DR. MARRONGELLE: That's interesting, because what happens so often with those of us that do this kind of work, is that we arrive at the same conclusions from different methods, or different angles.

DR.: When I use the magnet, either north or south poles, it takes out the idea of thought process in muscle testing.

DR. MARRONGELLE: Right.

DR.: In other words, I'm picking up whether the north pole would be a hypoactive area and south pole the overactive, and just treat it with the opposite pole. Of course, I use the color therapy unit that Ludwig has or the Medisend

[http://magnetotherapy.de/Produkte/E_Kleingeraete/E_Medisend.htm]. It's super, and it's just been phenomenal. That with the laser and the products, instead of testing the natural E of E points, or going through all the alarm points in acupuncture, it's so quicker. It's so much quicker.

DR. MARRONGELLE: That's a good point. That's great. What are the rest of you seeing here? I want to hear some feedback on what you're experiencing and how you are utilizing these products.

DR. DAVIS: I'm quite impressed with the immediate effect, particularly with insomniacs having the Stress Relief, plus using 14 or 15 different remedies. It's been very interesting that this whole thing of the loss of energy is an energetic phenomenon. It's not a biochemical phenomena--of course, biochemistry's failed. But it's a different phenomenon with these chronic fatigue/fibromyalgia patients, as well as those who have succumbed to cancer for whatever reason. And the phenomenon there is that in the persistent quest for energy--and that's what the patients are always looking for--that's their first chronic symptom--and then they'll disappear as a patient when their energies come up, whichever way we happen to be connected. What I'm finding very fascinating is that I started doing something last week where I'm using some of the Revive in the morning with some of these chronic fatiguers, and we're trying to match their circadian rhythms--trying to re-track them. What we're finding is a little better bump in their blood pressure regulation as far as when they stand up and that hypotension phenomenon, dizzy, disorientation, sluggish and they lose energy quickly. What we're finding is an encroaching adrenal failure phenomenon, with the energetics of Revive and even Rejuvenation. We started using that and both of them together with some of these more difficult cases. We've started to see some real dramatic changes in them. I don't have enough numbers yet to be real authoritative, but at this point I'm real encouraged with what I see.

DR. MARRONGELLE: Well, we all have trouble with those cases. You're obviously seeing that hypotonia phenomenon.

DR. DAVIS: Always.

DR. MARRONGELLE: I mean it's always there. So anything that we can do that will correct that, that is in and of itself a component--the hugest component of the disease state. I don't think they can be stable or even have enough energy to get well until that mechanism is restored in the body.

DR. DAVIS: That's accurate. I'm with you a hundred percent.

DR. MARRONGELLE: ...you know? I've seen all of Paul Cheney's PV O2 studies and PC O2, etc., etc., etc., and they observed physiologically the phenomena, but the corrections don't occur, because they're not getting down to that root which is the brain's control of the vascular system, and the hypotonia and the Vagul influence, etc.

DR. DAVIS: Exactly right. And also what they do, what they always do, is go after trying to stimulate sympathetic remedy in an attempt to jack up the already failed adrenal-hypothalamic-pituitary axes. They get a bump for about two weeks, they'll look terrific, but then they'll crash as worse then when they started.

DR. MARRONGELLE: I always tell them they're whipping the horse that pulls the wagon.

DR. DAVIS: That's exactly right. If we can figure out how to get that rhythm up so that they are sympathetically toned during the day, and parasympathetically re-regulated at night they'll do a lot better.

DR.: Another thing I've noticed, too, is that by using these Subtle Energy products, is that I use a lot less homeopathy than I used to. Have you guys seen that, too?

DR.: I've seen the dosages go down even in using nutritional or homeopathy, whatever, the dosages go down as you enter into and support the energy.

DR. DAVIS: What I'm finding also is that I've blended some homeopathies with the specifics of the Subtle Energy, and have actually found that makes a quicker response in the acute phase.

DR.: A powerful thing to try, too, guys, think about this. Is use the patient's own body fluids--you know, saliva, urine, which is the most convenient one, and invert them through a wave front and put it into a drainage remedy, or whatever remedy--just infuse them with some of the Subtle Energy products. Like what Jeff was talking earlier about the strep situation in animals.

DR. MARRONGELLE: This works incredibly. We'll take a hair and a saliva, and I've done it with my horses. Unbelievable. Because all their DNA is in their hair. And all their chronic toxicity and all their acute stuff is going to be in saliva--pretty much so. And I'll put a remedy together and then invert it using that device, and put it back into them from afar. I mean they sent me samples down from my farm upstate, and I fixed my horses upstate, and boom, they get better. The animals REALLY respond to these subtle energies.

DR. TRAN: I concur with you a hundred percent, because I found out that these energy formulas work very well in neurological disorders. Seizure problems and severe head

trauma from accidents, and I also like to use them in severe trauma--animal run over by car, gunshot wound, and infection situations with decontamination it works so well, and so fast. That's what I like about them.

DR. MARRONGELLE: Well, the innate thing about animals is they auto-regulate so much more rapidly than we do. They have a much stronger survival mechanism, I think, and they don't have the extraneous stuff.

DR. DAVIS: I think we're just worn out. We've got survival every moment in America.

DR. MARRONGELLE: Exactly.

DR. DAVIS: That emergency energy is completely gone.

DR. MARRONGELLE: Yes, where that's not so in critters. We keep ourselves so near to the edge of stress, of blown out, all the time that what we've been seeing more and more over the years is people have an overwhelming stressor and they never go back to being the way they were.

DR. DAVIS: Exactly right.

DR. TRAN: In connection with this, I like the Stress Relief because it keeps the cats and the nasty, mean dogs under control very quickly. After about the first or second dose, we can work with them very easily.

CONSTANCE: Guys, our time is coming rapidly to a close. Know that there was a question at least from some of you as to what do you tell your patients what this stuff is and how it works?

DR. DAVIS: What's the right answer?

DR. MARRONGELLE: The answer? We discuss this I can't tell you how often among ourselves. Do we hide this under a bushel and just say, Here take this. Do we try to explain the string theory of physics to somebody with an eighth-grade education? Do we maybe offend someone's religious sensitivities by saying it helps your Chi? You know? We have kicked and bantered this around so often. I think it's going to come back to our earlier explanation that we started with, that we have discovered by the use of very high-tech physics, a way to influence the organizing energy between our cells, between our molecules. By helping that energy, that major glue factory that holds us together, we can positively influence the body's physical response. Whatever works for you guys, I'd love to hear it. Constance and Yury would love to hear it.

DR. DAVIS: How do you respond when they look at a remedy and it's all the same and yet the label's different?

DR. TRAN: I call the formulas energy medicine, or vibrational medicine. I don't have any problems with my clients accepting that.

DR.: I don't have a problem either. I just tell them that they are high-powered homeopathics and...

DR. TRAN: Yeah, I also mention it's a form of homeopathic substance.

DR. MARRONGELLE: What I did was share this with Constance the other day. In my practice what I've done is most of our patients now are becoming--those that glom on to alternative guys--is that they are somewhat familiar with homeopathics, and they are somewhat familiar with isopathics. So realizing that this is Subtle Energy, that quantum physics thing, just calls it quantum-pathic, a new generation in technology.

CONSTANCE: Are there any questions you'd like to put on the table, or observations...

DR.: One quick thing. Patient compliance when there's multiple formulas with multiple dosages. How have you found that working?

DR. MARRONGELLE: At that point, if you're doing four things or something, blend them. I just blend them and give them to them. Obviously what Gary's seeing and what some of the other of us are seeing--I mean, I pulled a calf around, guys, the same way, by just actually infusing it during rectal infusion and oral infusion with intubating them down the throat, and doing rectal infusion with the enema bags. You just have to get the energy in the body. You just have to get it into the unit. So it doesn't matter. We've done kids with g-tubes. We've done adults--if you're seeing intense cancer patients, some of them may not be able to have oral nutrition or anything, and they already have a g-tube going in. You can put it right in there. As long as it gets in the body, it doesn't matter. The rules aren't there in energy medicine with these energetics like they are with homeopathy where it's got to have the brain stimulation, sublingual--it just has to be inside the unit somewhere by whatever method. So, combining it, whatever works, it all works. It all works.

DR. TRAN: Could we use these drops in food?

DR. MARRONGELLE: Oh, absolutely. Sure. Put it in juice...

DR. TRAN: It's really easy to dose animals, just drop it in their food and they're eating it. In my case, most of the time, I use the product in Tahitian Noni juice. I have no problem at all.

DR. MARRONGELLE: Use whatever carrier you want to use with it. Someone had mentioned earlier about using it with homeopathic and potentiating homeopathic formulas. It does not disturb the effect of homeopathics. That has not been my observation in any way. I mean you can put them in together in the same water. It does not change the homeopathic resonant frequency.

CONSTANCE: Does everybody else have that same experience?

DR. DAVIS: Definitely.

DR. MARRONGELLE: Yep. Because they're different animals. They are definitely different animals.

DR.: They're very stable.

DR. MARRONGELLE: You know, it's so great talking with this core group. We welcome your feedback.

CONSTANCE: Should we try doing this again?

DR. TRAN: Yes.

DR.: It wouldn't be bad monthly, to get together?

DR. TRAN: Yeah, I'd like to talk about the use of these products. We need to share experience. My work was made very easy by Jeff's insights and his work when he gave me his experience.

CONSTANCE: All right, gentlemen. Well, I really appreciate your time. Thank you for your insights and we'll talk soon. Thank you!
