

Dr. Yury Kronn – Brief Biography

PHYSICIST INVENTOR

Dr. Kronn is a quantum radiophysicist originally educated in Russia's prestigious Gorky University where he received his PhD. His graduate studies at Gorky State University (now Nuzhi Nogorod) were with the Department of Radiophysics where the famous Russian academician, A. A. Andronov, created one of the world's most advanced physics environments for the theoretician wanting to analyze and understand the complexities of non-linear systems. As the physics department founder, Andronov created a unique framework for exploring certain complex processes in chemistry, biology and physics that previously had eluded straight-forward mathematical system standards.

Dr. Yury Kronn was unanimously awarded a “Doctor of Sciences” degree by the Scientific Committee of Lebedev's Institute of Physics, in Moscow, chaired at the time by N. G. Basov, a Nobel Prize winner. This award was established within the European educational system and is reserved for scientists who have originated a new direction in their field. Dr. Kronn has been recognized worldwide as a contributor to the field of non-linear quantum radiophysics. He developed the comprehensive theory of quantum nonlinear interaction of coherent electromagnetic fields with atoms and molecules, and co-authored the definitive book in his field (Nonlinear Resonant Interactions of Light with Matter). He has published more than 75 scientific articles. In addition, he developed the theory of multi-photon lasers and contributed to the theory of laser-stimulated chemical reactions. In supervised applications of his theory, he also created the world's first four-photon tunable laser frequency converter in the infrared range.

For many years Dr. Kronn was one of the leading theoreticians in high frequency electromagnetic vibrations, laser physics and nonlinear optics. Today, he is a leader in the science of Subtle Energy/ Vital Force.

Dr. Kronn has been involved in Subtle Energy physics research for the past 30 years, including extensive studies into various Eastern medical traditions in continuous use for the past 5000 years, that embrace the Chinese concept of 'Chi' energy and the benefits of balancing Subtle Energy in the body's meridian system.

Dr. Kronn uses the analogy of computer software to underscore the significance of body re-programming using the science of Vital Force. “We have learned to make complex mathematical calculations possible,” he says, “by manipulating the electrical fields we call 'software' that govern our computer hardware. The human body is similar. The software programming that governs the human

computer hardware. The human body is similar. The software programming that governs the human body is the non-electromagnetic energy field called Subtle Energy. It is the body's Vital Force. One of the great developments coming to the world's health industry involves re-scripting one's Vital Force in order to change the software programming of one's own physical body.”

Dr. Kronn once explained a series of nonlinear optics phenomena that had puzzled scientists for years. Today he explains the phenomena of subtle energy to scientists who can't see it but observe its effects that are everywhere to be found.

During his years as a scientist in the Soviet Union, he was an advocate for scientific and cultural exchanges with non-Soviet nations, including Europe and the United States. In 1982 he was one of the organizers of the “Trust Group” which became known all over the world for its work to promote trust between the East and the West. In 1987, Dr. Kronn organized and chaired the Disarmament Section of the first Moscow International Symposium for Humanitarian Problems in a broadcast heard around the world. A major news event reported by the Washington Post and NY Times and carried live by BBC and the Voice of America, it earned Dr. Kronn support from Greenpeace and other large organizations and NGOs worldwide. Unpopular with Soviet authorities at that time, his public recognition abroad provided some protection from those authorities although the environment in which he lived and worked became increasingly unsupportive and challenging. He subsequently left the Soviet Union as a political refugee in 1988, arriving in the United States with no passport or belongings except his suitcase and \$150 to begin a new career.

His research and development work in the United State initially focused on creating the Vital Force generator, the centerpiece of his current achievement. As his new technology advanced, he completed the Vital Force system with its ability to identify precise Vital Force patterns and generate, amplify, store, and infuse them into a trace mineral solution or other medium. This remarkable development brings to the world an effective new capacity to address a wide range of the world's physical and psychological issues and a wide range of unique commercial applications.

For a list of published scientific papers and other information about the physicist/inventor of Vital Force Technology, see *Dr. Yury Kronn, The Man Behind the Science, Biographical Profile*, available upon request.
